Part-B

Sel-C

Q-1

(b) Initially empty

Insert

19, 34, 23, 7, 5, 17, 29

Delete

23, 19

• Inserting - (19)

• Inserting 34

• Inserting 23

• Inserting 7

Insert 5

YASH GUPTA  
Semester 1-2024

• Insert 17

• Insert 24

• Delete 23

• Delete 19

Q-2

YASH GUPTA  
S2 0200010239

(a) A = 

5	3	17	10	84	11	6	22	9
---	---	----	----	----	----	---	----	---

for i = 4

for i = 3

for i = 2

YASH GUPTA  
S20000010239

for i = 1

Q-2  
(b)

YASH GUPTA  
S20200010034

Considering  $A[0]$  is sorted  
Then we will check for every  $i$  whether  
the array is sorted until then or not.

(c)

Best case -  $O(n)$

Average case -  $O(n^2)$

Worst case -  $O(n^2)$

YASH GUPTA

S20200010239

Q-3  
(b)

Q-3  
(a)

- Divide  $[0, n)$  into  $k$  equal buckets
- Distribute the  $n$  input values into buckets
- Sort each bucket
- Go through the buckets in order, listing elements in each one.

YASH GUPTA  
52020002039

Edge	Size
1-2	2
<del>2-3</del>	<del>3</del>
3-7	3
5-7	4
2-3	5
1-3	6
4-3	7
2-4	9
4- <del>2-5</del>	<del>10</del>
5-6	11
4-5	12
6-7	13

By selecting the shortest path, and not forming a cycle we form Kruskal's Spanning tree

- ①-② is selected first

- ③-⑦ is selected

Y A SINGH  
Siddhant

• ② - ③ is selected

• ①-③ can't be selected, ④-③ is selected

~~2-4~~, ~~4-7~~, ~~7-9~~, ~~2-9~~, ~~2-5~~, ~~4-7~~ can't be selected  
 so 5-6 is selected

Minimum Spanning Tree

0-4

(5)

YASH GUPTA

S2200010239

min no of edges to connect 700 vertices  
is 699.
