

# **OC EXPERIMENT LAB 8**

**TITLE:** Writing 8051 assembly language programs

**NAME:** Yash Gupta

**ROLL NO:** S20200010234

**OBSERVATION:** In this lab I learnt how to write advanced 8051 assembly language programs in keil software.

Q1. Write an 8051-assembly language program to detect whether a given number is even or odd. If number is even set 'carry flag' else 'clear the carry flag'.

Source Group 1  
Q1 LAB 8.as

Q1 LAB 8.asm

Q2 lab 8.asm

Q3 lab 8.asm

```
1 ORG 0000H ;Starting the program from 0000H position
2
3 MOV A, #6H ;Giving 6H value to Accumulator register
4 MOV B, #2H ;Giving 2H value to B register
5
6 DIV AB ;Quotient of A/B is in A and remainder in B
7 MOV A, B ;Storing remainder of our operation in Accumulator register
8
9 CJNE A, #1H, HERE ;If remainder is not 1 it will jump to HERE tag
10 CLR C ;If the given number is odd carry flag is cleared
11 SJMP EXIT ;Jumping to end of the program
12
13 HERE: SETB C ;If number is even Carry flag is set
14 EXIT:
15 END ;End of program
```
